## RESEARCH EXPERIENCE

- **National Renewable Energy Laboratory** Jan 2024 – Present  
*Postdoctoral Researcher (Mentors: Juliane Mueller and Devon Sigler)*  
Remote, United States
  - Designed an adaptive sampling rule for multi-fidelity simulation oracles.
  - Developed a novel stochastic trust region method for multi-fidelity stochastic optimization.
  - Developing a second-order optimizer that uses diagonal Hessian approximations for deep learning applications.
  - Developing a differentiable optimization algorithm for mixed-integer problems.
- **North Carolina State University** Sep 2019 – Dec 2023  
*Research Assistant (Advisor: Sara Shashaani)*  
Raleigh, United States
  - Analyzed the computational complexities with and without CRN in stochastic optimization, and theoretically demonstrated that CRN can significantly reduce the computational burden.
  - Enhanced the finite-time performance of the adaptive sampling trust-region method for simulation optimization through four key refinements:
    - Improved the chances of identifying better solutions through the integration of direct search techniques,
    - Constructed a quadratic model with diagonal Hessian within the trust region framework,
    - Reused previously evaluated solutions and corresponding simulation outputs to reduce computational cost,
    - Applied Common Random Numbers (CRN) to reduce the variance in function and gradient estimates.
  - Showed that the refined algorithms converge to the first-order stationary point almost surely.
  - Developed simulation optimization solvers and problems from scratch and tested them using Python ( SimOpt).
  - Developed a stochastic oracle for traffic signal control problems, analyzed its loss landscape characteristics, and evaluated the performance of various solvers in addressing the problem ( Poster).
- **Argonne National Laboratory** June 2022 - Aug 2022  
*Summer Intern (Mentors: Matt Menickelly and Jeffrey Larson)*
